

Scenario

We built a predictive model using the ameshousing3 data and validated it using ameshousing4. We identified the best model for predicting home sale prices, and ultimately future commissions for our real estate firm. The model can now be deployed to score data for a new set of homes in Ames. We'll discuss different scoring methods and then use the GLMSELECT and PLM procedures to score home sale data.

Statistics 1: Introduction to ANOVA, Regression, and Logistic Regression
