

## Lesson 1: Multiple Linear Regression

Lesson Overview 0:54

Review of General Linear Models

Introduction 0:29

Objectives

General Linear Model 1:45

Assumptions for General Linear Models  
4:52

Types of Linear Regression Models 3:04

Multiple Linear Regression Model 1:33

Question

Scenario: Exploring the Data 1:08

Using PROC SGSCATTER to Explore  
Variable Relationships 2:15 Exploring the Data 2:04Scenario: Building a Multiple Linear  
Regression Model 0:27SAS Procedures for Building Multiple  
Linear Regression Models 1:04

## Objectives

In this section, you learn to do the following:

- identify the properties of the general linear model
- do initial exploratory data analysis using the SGSCATTER procedure
- fit a multiple linear regression model using the GLMSELECT procedure
- examine linear regression assumptions using the diagnostic tools that are available in the REG and UNIVARIATE procedures
