

Introduction

In the Statistical Thinking and Problem Solving module, you learn why statistical thinking is vital for solving real-world problems. You are introduced to different approaches for solving problems and learn about statistical problem solving.

You learn how to clearly define your problem and see a variety of tools for understanding the process that you will improve. You learn tools for generating ideas and for identifying potential root causes of the problem.

Finally, you learn about data. You learn about different types of data and about different approaches to data collection.

Statistical Thinking for Industrial Problem Solving
