

Practice: Recoding Missing Values

In this practice, you continue with the file **Explore Missing.jmp**. This file is missing many values for the last column, **X6**.

1. Use **Recode** from the Cols menu to replace the missing values for **X6** with the label **Missing**. Save the recoded data in a new column, **X6-Missing**.

In **Recode**, enter the word **Missing** in the field for the missing values, change the name of the new column to **X6-Missing**, and click **Recode**.

2. Use **Analyze, Distribution** to produce a graph and summary statistics for these three variables: **Response**, **X6**, and **X6-Missing**. What do you observe?

For **X6-Missing**, the *Missing* category is included in the frequency table. When you click the bar for *Missing*, you see that all these values are *Fails*.
